

FINANCIAL DISCREPANCY & REVENUE RISK AUDIT

PREPARED FOR

Acme Commerce Co.

Prepared by ReconFlow AI Auditors

Date: June 16, 2026

Executive Summary

This audit was conducted by ReconFlow's AI-driven reconciliation engine. We analyzed over 15,400 transactions across Stripe, Shopify, and QuickBooks for the period of January 1, 2024 to March 31, 2024. The objective of this audit is to identify unrecorded revenue, missing payouts, duplicated accounting entries, and general financial discrepancies that pose a risk to the financial integrity and cash flow of Acme Commerce Co.

REVENUE AT RISK	RECOVERABLE REVENUE	CRITICAL FINDINGS
\$14,820.00	\$11,640.00	12

High-Level Impact: The total identified revenue at risk represents approximately 1.2% of gross processing volume for the period. Of the \$14,820 identified, \$11,640 is fully recoverable through immediate administrative action (e.g., matching unrecorded Stripe payments or collecting on unpaid invoices). The remaining \$3,180 consists of unrecorded refunds and chargebacks which overstate current revenue but are non-recoverable.

Data Sources Analyzed

System	Record Type	Volume Analyzed
Stripe	Charges, Refunds, Disputes, Payouts	15,402 records
Shopify	Orders, Fulfillments	14,890 records
QuickBooks	Invoices, Sales Receipts, Journal Entries	15,310 records

Detailed Discrepancy Findings

The following section details the most critical discrepancies identified by the matching engine. Each finding includes financial impact analysis, root cause categorization, and recommended remediation steps.

AUDIT-001 Missing Transaction (Revenue Leak) CRITICAL	
Financial Impact:	\$2,400.00 (Recoverable: Yes (\$2,400.00))
Transaction Info:	Feb 14, 2024 Customer: Sarah Mitchell
Description:	A finalized payment of \$2,400.00 was processed via Stripe (ch_3Oabcd123) on February 14th, but no corresponding Sales Receipt or Invoice was found in QuickBooks.
Root Cause:	Payment received outside normal invoicing workflow, likely a manual invoice link sent directly to the customer.
Action Required:	Create a matching Sales Receipt in QuickBooks for \$2,400.00 dated February 14, 2024, mapped to the primary Stripe clearing account.

AUDIT-002 Refund Mismatch HIGH	
Financial Impact:	\$3,200.00 (Recoverable: No)
Transaction Info:	Mar 05, 2024 Customer: Elena Rodriguez
Description:	A full refund of \$3,200.00 was issued via the Stripe dashboard for order SH-44910. However, the original invoice remains fully paid in QuickBooks with no Credit Memo applied.
Root Cause:	Refund processed directly in the payment gateway rather than initiating the refund through the accounting or e-commerce platform.
Action Required:	Create a Credit Memo in QuickBooks for \$3,200.00 to Elena Rodriguez dated March 5, 2024, to accurately reflect the reduction in revenue.

AUDIT-003 Duplicate Accounting Entry		CRITICAL
Financial Impact:	\$1,850.00 (Recoverable: Yes (\$1,850.00 tax savings))	
Transaction Info:	Jan 22, 2024 Customer: James Whitfield	
Description:	Two identical QuickBooks Sales Receipts for \$1,850.00 exist on January 22 for the same customer, but only one corresponding charge exists in Stripe.	
Root Cause:	Manual data entry error or sync tool glitch resulting in a duplicated record.	
Action Required:	Void or delete the duplicate QuickBooks entry (TxnID: 9482) and verify the remaining entry properly matches the Stripe charge.	

AUDIT-004 Uncollected E-commerce Order		CRITICAL
Financial Impact:	\$1,200.00 (Recoverable: Yes (\$1,200.00))	
Transaction Info:	Feb 28, 2024 Customer: David Park	
Description:	Shopify order SH-44587 for \$1,200.00 is marked as 'Paid' and 'Fulfilled', but no matching charge was successfully captured in Stripe.	
Root Cause:	Payment gateway timeout or authorization failure that was incorrectly synced as a successful payment back to Shopify.	
Action Required:	Contact the customer to collect the \$1,200.00 payment, as the goods have already been fulfilled without actual fund capture.	

AUDIT-005 Unrecorded Chargeback		HIGH
Financial Impact:	\$890.00 (Recoverable: No)	
Transaction Info:	Mar 12, 2024 Customer: Monica Chen	
Description:	A chargeback of \$890.00 was lost in Stripe, and the funds were deducted from the account balance. No adjustment exists in QuickBooks.	
Root Cause:	Dispute lost in gateway. Lack of automated webhook integration for dispute events into the accounting ledger.	
Action Required:	Record a Journal Entry for \$890.00 crediting Accounts Receivable and debiting Chargeback Expense, dated March 12.	

Strategic Recommendations

Based on the root causes identified across the discrepancies, ReconFlow recommends implementing the following process improvements to prevent future revenue leakage:

- 1. Unify Payment Workflows:** Avoid processing manual payments or refunds directly in the Stripe dashboard. Initiate all financial actions from Shopify or QuickBooks to ensure proper downstream syncing.
- 2. Implement Dispute Tracking:** Establish a standard operating procedure for recording chargebacks in QuickBooks immediately upon receipt of a dispute notification from the payment processor.
- 3. Monthly Automated Audits:** The volume of transactions makes manual reconciliation error-prone. Run the ReconFlow automated matching engine at the close of every month prior to finalizing financial statements.
